EDUCATION

HKBK College of Engineering

Bengaluru, India

Bachelor of Engineering in Artificial Intelligence and Machine Learning, CGPA: 8.12

Dec 2022 – Present

- Relevant Coursework: Data Structures, Operating Systems, Database Management, Artificial Intelligence, Machine Learning, OOPs (Java), Computer Networks, Data Analysis, Computer Vision, Deep Learning, NLP

TECHNICAL SKILLS

Core Competencies: Machine Learning, Deep Learning, NLP, FastAPI, Agentic AI

Programming Languages: Python, Java, C, HTML, CSS, JavaScript

Developer Tools: VS Code, PyCharm, Docker, Google Colab, Jupyter Notebook

Frameworks/Libraries: React.js, Node.js, Tailwind CSS, TensorFlow, scikit-learn, Hugging Face, Pandas, NumPy

Databases: MongoDB, MySQL

AI Tools: n8n, Cursor, Bolt, OpenAI, Claude, GitHub Copilot, Warp, Replit AI

EXPERIENCE

Software Engineer Intern

Oct 2024 – Jan 2026

Vyas LDM

Remote, India

- Implemented frontend features and reusable UI components for a React-based web application
- Developed core application functionality and integrated frontend workflows with backend services
- Contributed to production feature development across the application stack

Agentic AI Intern

Feb 2026 – May 2026

Innomatics Research Labs

- Developed agentic AI and LLM-based applications using Python, LangChain, and LangGraph
- Built RAG pipelines integrating document retrieval, embeddings, vector search, and LLM-based response generation
- Designed multi-step agent workflows with LangGraph for task orchestration, routing, and tool-based execution
- Developed FastAPI REST APIs to integrate AI models and backend services into application workflows
- Applied prompt engineering, embeddings, and vector databases to improve AI workflow orchestration on practical projects
- Collaborated on AWS-based development, testing, debugging, and integration of AI/ML solutions

AI/ML Engineer

Feb 2026 – Present

Vyas LDM

Gurugram, India

- Built a RAG pipeline for a legal AI product using PostgreSQL, pgVector, and VoyageAI embeddings, with per-organization and per-user chunk isolation and Groq-based query rewriting
- Refactored the AI agent harness across orchestration, RAG, research, and tool capabilities, producing a documented architecture and request lifecycle
- Extended agent context with organization reference libraries and matter planning hierarchies to improve grounding for legal research and drafting
- Built an LLM-based document annotation and classification pipeline with document-specific schemas resolved dynamically at runtime
- Implemented multi-provider LLM routing and model pinning with API-key management and fallback handling for provider and model availability
- Built a case timeline generation pipeline from document text extracted through the AI processing workflow
- Debugged LLM instruction-following and planner issues by combining LLM reasoning with deterministic application-level validation and filtering
- Built durable AI document-processing workflows for PDF extraction, classification, annotation, and retries using Restate for cross-service execution

PROJECTS

RAG PDF Question and Answer System | *Python, Streamlit, LangChain, FAISS, Gemini LLM*

Dec 2025

- Built a complete RAG-based system supporting multi-PDF upload, advanced parsing (PyMuPDF, pdfplumber, PyPDF2), and a full retrieval pipeline using text chunking, SentenceTransformer embeddings, and FAISS vector search
- Integrated Google Gemini models with intelligent fallback logic to deliver accurate, citation-backed answers, with caching and vectorstore auto-loading for optimized performance

Object Detecting System | *Python, TensorFlow, OpenCV*

Aug 2025

- Developed and optimized a real-time object and animal detection pipeline using YOLOv5/YOLOv8 and OpenCV
- Improved model robustness with preprocessing techniques such as CLAHE, Retinex, and Unsharp Mask for challenging lighting conditions, and handled model training and deployment with Python and PyTorch

Sentiment-Based Roast & Compliment Generator | *Python, Streamlit, TextBlob, gTTS*

Aug 2025

- Built a sentiment analysis application that classifies text as positive, negative, or neutral using TextBlob
- Designed a dynamic generator that produces context-aware roasts or compliments from 100+ custom-crafted, tech-themed phrases

CERTIFICATIONS

Nvidia Jetson Nano | [Certificate](#)

Apr 2025

- Completed certification covering AI, GPU computing, and deep learning, gaining hands-on experience with real-world tools and frameworks

Machine Learning | [Certificate](#)

Oct 2024

- Gained hands-on experience with supervised, unsupervised, and reinforcement learning techniques, including regression, decision trees, clustering, and neural networks

Artificial Intelligence in Industrial and Management Engineering – NPTEL | [Certificate](#)

Aug – Sept 2025

- Worked on AI-driven problem-solving tasks in industrial and management engineering, including prediction, process optimization, and automation
